

Paper

The newly-designed P-2000 is an electrical resistance-type moisture meter, utilizing the relationship between moisture content and electrical resistance. The contact pins mounted on the top of the meter are used for making direct contact with the material. Various external electrodes are also available for specific applications.

The P-2000 is especially useful for testing paperboard, corrugated stock, and paper tubes. It is ideal for plant superintendents, inspectors, buyers and salespeople.
