

The RAL DESIGN System

RAL DESIGN System has been developed primarily for sophisticated decorative colour design. It is the colour system of their choice for example, for architects, designers and advertising agencies - not only in Germany but also throughout the world. With its methodically arranged, colour metric defined colours shades the system is said to be the perfect instrument for individual colour design and since its debut on the market in 1993 it has quickly become the top choice for users everywhere. Creative colour design requires a multitude of colour nuances - RAL DESIGN accomplishes this task with the utmost precision.

Revised RAL DESIGN System

The revised RAL DESIGN system now presents itself as an improved system with a total of 1625 shades. The number of pastel colours has been increased by 26 new shades to reflect the growing market relevance and the sensitiveness of the eye to pastel colours. On the other side, the number of dark, low-saturated and less frequently used colours has been reduced.
